Keith Harrison	sample@company.com	Free Trial	Paramedic Jane responded to a 65-year-old male experiencing sudden chest pain radiating to his left arm and jaw, along with shortness of breath and sweating. On arrival, he was alert but visibly distressed, rating his pain at 8 out of 10. Jane assessed his vital signs, noting a blood pressure of 150/90, heart rate of 100, respiratory rate of 18, and oxygen saturation at 95% on room air. After administering aspirin and beginning oxygen therapy, Jane established an IV line to prepare for transport. She then informed him of the possible signs of a heart attack and advised that immediate hospital evaluation was needed for further management. The patient agreed, and Jane transported him to the nearest cardiac center, monitoring his condition closely en route.	Subjective: Paramedic Jane responded to a call for a 65-year-old male experiencing sudden chest pain radiating to his left arm and jaw, accompanied by shortness of breath and sweating. Objective: Upon assessment, the patient was alert but in discomfort. His vital signs were recorded as follows: blood pressure of 150/90, heart rate of 100, respiratory rate of 18, and oxygen saturation of 95% on room air. Assessment: The patient presented with symptoms consistent with a possible heart attack, including chest pain radiating to the left arm and jaw, shortness of breath, and sweating. Plan: Jane administered aspirin and began oxygen therapy. An IV line was established in preparation for transport to the hospital. She informed the patient of the possible signs of a heart attack and advised that he undergo immediate evaluation at a cardiac center.	01/11/2024
